- Uses same applications as full sized systems
- Broadcast quality video

Value-priced broadcast quality composite system ideal for entry level productions

The Right Features at the Right Price

While other companies may be talking about digital television upgrades, with added expense and complexity, if it is a standalone, composite video character generator that you want, then Compix has your number. The LCGn line of CG's from Compix meet the standard definition needs of the broadcast, cable, house of worship, government and education communities who have found that composite video is perfect for their needs.

No Quality Left Behind

Just because the LCGn series is based on standard definition video, does not mean they have standard levels of performance. Every LCGn has the built-in simplicity and easy to learn and easy to use software applications found in our full sized systems. GenCG is a powerful design, layout and playback software package, all combined into a single and simple user interface. With the included graphic creation tools, the user can setup an entire graphics presentation offline, and then easily take those graphics immediately to air, while at the same time editing the next on air series. GenCG uses Windows MLE multiple language settings and True Type fonts, allowing multilingual support and unlimited font styles.

Compix LCGn Makes It Easy

Built to be easy to choose, easy to use, and easy on your budget, the LCGn family of entry level standard definition composite systems are designed especially to deliver your entry level graphic needs. The LCGn system is a ready-to-go character generator, since all LCGn single and dual channel systems have been fully assembled, configured, and tested before they leave the Compix factory. Just drop the LCGn into your facility, and begin creating your graphics and get to air. From out of the box - to on the air, nothing is faster to setup, easier to use or more worry free to own than an LCGn from Compix.

GenCG

Every LCGn comes with GenCG software, which gives you sleek fonts, colorful backgrounds and professional templates for instant use.
