

## **SONICFIRE PRO 5 EXPRESS TRACK EDITION**

### **Find it!**

Powerful searching features are imperative for a music library with thousands of tracks and a constant addition of new tracks every month. Sonicfire Pro 5's Express Track was designed to help you pinpoint the perfect music quickly.

- **Keyword Search**  
Find all the tracks that match your search term
- **Narrow by Categories**  
Narrow results by specific categories such as Style, Keyword, Instrument, Intensity and more.

### **New! Sensory Searching**

Find music that is close to what you want and then you can select "More Like This" to find all music similar to that track. Further adjustments like "Faster/Slower", "More Intense/Less Intense", etc. can be made to lead your search to the right track.

### **New! "Tap Tempo"**

Tap a tempo on your mouse to find all tracks that match that tempo.

### **Customize it!**

SmartSound pioneered customizable library music and is the only company to provide a music search engine that is also loaded with customization features. Once you find a track with the powerful searching options, you can adjust the final length, arrangement and instrument mix.

### **Length**

We don't limit you to the basic 15, 30 and 60 second cuts you get from other libraries. Simply type in the exact length you'd like and Express Track instantly provides a perfectly edited version with a musical beginning, middle and ending.

## **Variation**

Once you've selected a length, Express Track computes all possible musical arrangements available. Each variation is simply a different way to edit the track to fit your parameters. This gives you several creative options for every track.

## **Mood**

The list of preset Moods gives you instant access to different instrument mixes that can create a diverse set of sounds from a single track. You can select from preset moods like Drum & Bass, Dialog, Atmosphere, Breakdown, etc. to quickly get a custom sound.

## **Mood Mix**

If you want to remove an instrument or fine-tune one of the preset Moods, the Mix panel lets you precisely adjust each instrument layer.

## **Use It!**

Putting SmartSound Music to work in your productions is a simple process. Once you've found the perfect track and made any customizations, simply export the track as a .WAV or .AIF file.

- Export the music as a single file or save each instrument layer as a separate file. This gives you the ability to fine tune the music further in your editing software and also enables exciting creative options like a surround sound music mix.
- Send To – The “Send To” feature can send the music file right into your current project in several different applications.
- Output high-quality audio in formats supported by all popular editing applications.
- Drag'n Drop – Mac users get the added benefit of being able to drag a music track from Express Track and drop it into any folder. This will create a version of that track based on the currently selected customization options.
