

Celerity Fibre Channel Host Adapter Highlights

- Unprecedented Levels of Performance combining a unique hardware and software architecture
- Smooth Data Streaming featuring Advanced Data Streaming (ADS™) Technology
- One-Click Tuning - today's complex storage environments require fine-tuning of the host adapter to ensure optimal performance. The ATTO Configuration Tool allows you to modify adapter default settings so that you can get the best performance out of the adapter.
- Benchmarking Tools provide visual confirmation that your storage is working well - All host adapters ship with a benchmarking utility so that you can verify at a moments notice that the storage subsystem is working as expected
- Broad compatibility assured via comprehensive product validation and participation in industry interoperability testing
- SAN Management support - ATTO host adapters offer interoperability with leading SAN Management ISV solutions via integration of industry driven APIs such as SNIA HBA API
- Customized Driver Support - ATTO has a proven record of customizing hardware drivers for specialized applications, including target mode operation for Fibre Channel and SCSI
